Project: Medi-Seta (Medisina + Reseta)

Collaboration with Pharmacy for medicine guides.

Overview: Many individuals struggle to choose the right over-the-counter (OTC) medications due to limited knowledge or lack of access to healthcare professionals. Medi-Seta aims to bridge this gap by providing an accessible and informative tool for self-managing common health conditions with readily available OTC options.

Objective: Empower individuals to confidently make informed decisions regarding self-care and OTC medication selection for common, non-complex health concerns.

Description: Medi-Seta is a decision-support system (DSS) that guides users in choosing appropriate OTC medications for common ailments. By entering their symptoms, users receive personalized recommendations based on effectiveness, safety, and availability in local pharmacies.

Target Population: Individuals seeking information and guidance on self-care using OTC medications for common, non-complex health concerns, especially those with limited access to healthcare professionals.

Important:

- Medi-Seta is intended for informational purposes only and cannot diagnose medical conditions or provide medical advice.
- It is meant to support self-care decisions for common, non-complex health concerns and should not be used as a substitute for professional medical advice.
- If you experience severe, persistent, or worsening symptoms, consult a healthcare professional immediately.

How does it work?

The system starts by requesting information from users, such as their age, gender, and symptoms. Once the user provides this information, the system carefully examines it to understand the user's situation. Using this data, the system then presents the medication suggestions clearly and concisely, including dosage instructions and relevant precautions. The system might also offer extra info like possible side effects or other treatment options. Overall, the system aims to provide helpful suggestions for medication based on the information provided by the user.
